FySelf School

TwinH V.0.01

LEARN HOW TO USE TWINH by FySelf: Create and Train your Digital Twin

Introduction to the TwinH Project. Your Digital Human Twin.

Welcome to "LEARN TO USE TWINH: Create and Train your Digital Twin". This guide is here to support you on the exciting journey of creating and personalizing your own TwinH—a digital twin that serves as your virtual representation, ready to care for you, assist you, and accompany you through every online moment.

In today's digital world, your online identity is more valuable than you might imagine. TwinH acts as a virtual representation of yourself, designed to support you in managing your digital identity. This digital twin not only reflects who you are on the web, but also offers you the opportunity to generate income from your own data.

In an ecosystem where many companies monetize users' personal information, TwinH and FySelf give you back control, allowing you to be the one who benefits financially. By personalizing and training your TwinH, you not only ensure that your digital presence is authentic and secure, but you also open the door to new monetization opportunities that were previously out of reach.

What is TwinH?

TwinH is a computer application (subject of patent) that allows people to create a replica of their personal identity in the online world by validating the person's data in an identity management network such as FySelf.

TwinH will be an extension of yourself in the digital world, a representation that you can personalize and train to act, work and react according to your preferences and values. This digital twin not only allows you to explore new forms of interaction in the virtual realm, but also offers you the opportunity to monetize your digital presence through the Leht cryptocurrency, exclusive to FySelf.

Your TwinH will be your representative in the virtual world.

Benefits of using TwinH. Why create and use TwinH?

We live in the real world and control our physical identity and personal data according to our needs regarding the procedures and access to services that we need in our lives and to which we provide our information to access. At the same time, we have a virtual presence, in which we lose control of our identity and, consequently, control of our personal data on the web. In an increasingly digitalized world, having a well-defined and protected virtual identity is crucial. TwinH gives you the power to control how you present yourself online, ensuring that your information is always under your control.

How TwinH integrates with FySelf

The integration of TwinH with FySelf focuses on data collection, validation, training and updating of the twin, and obtaining economic benefits through the Leht cryptocurrency, which you can use interchangeably to operate with your TwinH or exchange it for Fiat money.

What will you learn in this guide?

Throughout this manual, we will guide you step-by-step through the process of creating and training your TwinH. From initial setup steps to advanced customization techniques, this guide will provide you with all the tools necessary to maximize the potential of your digital twin. We will also explore how you can use TwinH to generate revenue, leveraging the FySelf platform and its Leht cryptocurrency.

Getting Started with TwinH

Download the app here

By downloading the app, you will be able to test the potential that TwinH offers as a knowledge assistant. These facilities are similar to those offered by some AI systems created from the latest developments in natural language processing. However, at FySelf we have created our own AI system that improves many of these other systems that exist on the market. Try it and you will see the results. Once you have familiarized yourself with the application and have gone through all its information screens, it is time to open an account on FySelf, as it will be the platform that will allow you to create your Twin and take advantage of all its potential.

- Creating an Account on FySelf

Opening an account on FySelf is as easy as on any other app. All you need is an email address to which verification will be sent, and you're good to go. However, we advise you to carefully read the instructions we provide during the onboarding process, so that you become familiar with the ecosystem.

It is very important to note that FySelf is not designed for test accounts, fake accounts, accounts with different identities or multiple accounts. FySelf is an identity management system that allows you to generate income and use a wide variety of services that will benefit you in your daily life and even financially.

wallet or cryptocurrency wallet where you have enabled Leht from the beginning , since from this moment on, by simply activating the cultivation of your digital identity here, you will receive rewards in Leht daily. For more information, you can check our blog here.

This wallet will also allow you to receive the earnings in Leht on the day you decide to monetize your digital twin.

Personalization and facilities in the APP

Defining your Digital Identity in FySelf

Your digital identity begins with the collection of your data within the profiles offered by FySelf. There you can verify all the profiles and gradually complete the data you remember. Immediately, you will notice that the value of your Digital Reputation will begin to grow, which is based on three fundamental pillars: the amount of information you collect, the credibility you achieve regarding this information and the reliability you achieve as part of the network by validating third-party data.

As the value of your Digital Reputation increases, you will begin to earn Leht daily, participating in a distribution ranking among all users of the network.

Setting Preferences and Privacy

In each profile, you can decide whether that information will be public, private or protected, so that from this moment on, you will be the only one who can manage your personal data. It is important for you to know that your TwinH will only learn from the information that you have declared as public.

Training your TwinH

Introduction to the Training Process

In order to train and personalize your TwinH, it is essential to fill in as much information as possible in your profiles and decide which of this data will be public and used for training. In addition, directly in the application, you can add questions and answers about special information that you want your TwinH to incorporate into its knowledge base about you and that you have not found in the profiles. With each data update, simply click on "Upload information from profiles" and your TwinH will learn everything you have provided.

Examples of Effective Training

When reviewing each FySelf profile, you will find a repository of data that only you will manage, both to complete procedures with any institution and to earn Leht from cultivating your identity. Each piece of data that you incorporate and upload to TwinH will be learned and remembered, allowing you to enjoy a wide variety of facilities. Your twin will accompany you and assist you in situations such as medical consultations, institutional procedures and any need in your daily life.

A special form of training is to incorporate information from your life story, if you want to use your TwinH as a biographer of your existence. You can also add information about your knowledge or your work, and he will learn it so that he can replace you whenever you decide, responding to your friends, students or followers if you are an influencer.

Consulting and Personalized Sessions

To make the most of your Twin's capabilities and ensure that it is optimized to your specific needs, you can access personalized training services with a professional AI coach. These sessions are ideal for training your Twin in advanced skills and optimizing its use in key areas such as sales, customer service, task automation, and more. To start this process, you only need to write to the email provided by FySelf, and they will offer you everything you need to make your Twin the most efficient for free.

Data Management and Privacy

Importance of Data Security

At FySelf, we start from the principle that only the user has and decides about his or her personal information. Each user has a POD (Personal Online Data) that allows him or her to protect his or her information and share it only according to his or her needs. It is crucial that you are aware of this and ensure that you declare as public only the data that you can share with your TwinH so that he or she can learn about it. You can incorporate all the data you want, but you must be aware of whether your TwinH is open to the public or only to the people with whom you decide to share your information, both personal and the knowledge you want to add to make your life and work easier.

How to Control Access to Your Information.

When you return to the App, you have the opportunity to add a photo to your profile and decide whether your TwinH will be public for everyone or only for the contacts you select. You can turn off your TwinH at any time you decide, stopping any communication with it, including your own. This feature allows you to have total control over who can access your information and when, thus ensuring the security and privacy of your personal data.

Monetization and Use of Leht

Introduction to Leht Cryptocurrency

Leht is a cryptocurrency created by FySelf, the value of which is linked to your identity on FySelf and, therefore, on the web. Each action you perform within the FySelf platform ecosystem provides you with economic benefits expressed in Leht. For more information, you can consult the link provided on the platform.

Monetizing your digital twin, TwinH, is based on training it to act and represent you to your contacts or people who want to know the information you have mastered, your life experiences or the wisdom you have accumulated and contributed as a source of training for your TwinH.

How to Earn Income with your TwinH?

Once you have completed training your TwinH, you can check its effectiveness by chatting with it, just as you would with anyone else you give access to. This will allow you to ensure that your TwinH is ready to interact effectively.

Strategies to Maximize Your Profits

Once you are confident of the quality of your Twin's responses and have corrected any errors in information or data provided, you can invite your friends, contacts, students, clients or followers to interact with your TwinH. By asking questions and chatting with him, people will have to top up in Euros or Leht to obtain conversation tokens. Part of this money will accumulate and form part of the dividends that will be transferred to your Leht wallet.

Troubleshooting Common Problems

Frequently asked questions, doubts and queries.

To make it easier to understand, you can go to FySelf School, where you will find videos that we have created and selected. You can also visit our blog at blog.fyself.com. In addition, you can quickly clarify any doubts in the WhatsApp and Telegram groups and forums, where moderators will be available to answer any questions. The quickest option to consult is through the application itself, using the TwinH Angels, such as those from Licet or Betty .

Technical Troubleshooting and Updates.

Always keep the latest version of your TwinH by updating the application periodically. Every day we incorporate new features, developments and services to make your life as a user easier and, especially, so that you obtain the economic benefits that correspond to you in the digital economy for your identity participation on the web.

Contact Technical Support

You can also write to the following email: social @fyself.com for any questions or suggestions you wish to contribute to the development of this extraordinary project.

Plans and recharges

The process of interacting with your TwinH and uploading training data is a unique experience that continuously improves the quality of the answers as you interact and update the information. At FySelf, we offer you all the facilities for these first steps of learning and mastering the application free of charge. We provide you with an initial fund that allows you to generate queries, exchange information, verify the quality of the answers and experience all the advantages of having a digital twin on the web.

Once you have used up the initial balances we have given you, you can make one-off top-ups in Leht or Euros to continue your development. Remember that you can earn Leht

daily on the FySelf platform simply by carrying out the identity-cultivation actions that we recommend.

Additionally, you can opt for special plans to ensure that your TwinH is always active for you.

There is a free plan for testing purposes and several paid plans that you can check out in the app or on the website, which offer special options.

TwinH Updates and Future

New Features and Improvements

FySelf's purpose is to continue advancing the development of the TwinH project, transforming it into an essential tool for humans. TwinH is designed to be your "digital self" on the web, facilitating your life, your interactions, your daily procedures and your income in this new era of artificial intelligence that is advancing rapidly throughout the world. We are committed to introducing new functionalities and improvements that make TwinH an even more powerful and useful tool, adapting to the changing needs of our users and the digital environment.

Testimonials and Use Cases

User Success Stories

We have received numerous testimonials from users who have experienced significant changes in their lives thanks to TwinH. From simplifying bureaucratic procedures to generating additional income, users have found in TwinH a reliable ally to manage their digital identity effectively and securely.

Practical Applications of TwinH in Different Contexts

TwinH has been used in a variety of practical contexts, from professional to personal. In the work environment, it has facilitated information management and efficient communication with clients and colleagues. In the personal realm, it has enabled users to maintain tighter control over their personal information and monetize their digital presence in innovative ways. These use cases demonstrate TwinH's potential to improve people's lives in multiple ways.

How to Monetize Your Digital Human Twin?**

In the contemporary digital age, innovation knows no bounds, and the concept of a "digital human twin" stands as one of the most fascinating manifestations of this technological evolution. A Twin H, or digital human twin, is a virtual representation of oneself that interacts with others in the vast digital world. However, what many are unaware of is that these interactions can be monetized. In this text, we will explore how to transform your TwinH's interactions into tangible income.

Understanding TwinH Monetization

Monetizing your digital human twin is based on the accumulation of credits, generated from the interactions that your followers have with your TwinH. These interactions can manifest themselves in the form of texts, audios or videos, each contributing to your monetization progress bar. The goal is to reach 100% of the credits needed to start earning income.

To achieve this, it is essential to foster an interactive and engaging environment for your followers. The more meaningful interactions you generate, the faster you will reach the 100% threshold. This involves not only offering and educating your TwinH with the content your followers expect or need, but also actively participating in promoting your TwinH as an assistant or promoter of your services including answering your followers' queries.

The Credit Accumulation Process

Every interaction your Twin H has with your followers translates into credits. These credits accumulate and are visible through a progress bar that indicates how far you have progressed towards the 100% goal. It is crucial to maintain a constant flow of sharing from your Twinh to maximize the accumulation of these credits.

You should make sure that your twin offers engaging responses within the profile you have prepared for him and that he uses different communication formats such as texts, audios and videos. This not only keeps your followers interested, but also optimizes the amount of credits you can accumulate. The quality of interactions is just as important as the quantity; therefore, it is essential that conversations are meaningful and relevant.

Receiving Income Through Your Wallet

Once you have reached 100% of the necessary credits, you will be ready to start receiving income. To do this, you must configure your Wallet , where you will receive the LEC (Live Engagement) . Credits) generated by your Twin H. This process involves entering your Wallet contract into the system, ensuring that the earnings are transferred correctly.

It is essential to ensure that all your Wallet details are correctly set up to avoid any inconvenience in receiving your LEC. Once set up, you will be able to enjoy the economic benefits of your Twin H interactions, turning your digital efforts into real income.

Monetizing your digital human twin represents an exciting opportunity to transform your interactions in the digital world into a source of income. By focusing on generating engaging content and fostering meaningful interactions, you can accumulate the credits needed to reach 100% and start receiving LEC in your Wallet . This process allows you to

explore new forms of digital engagement and offers an innovative avenue to monetize your online presence.
